

To place an OurStage player on your website, MySpace, blog, or other site:

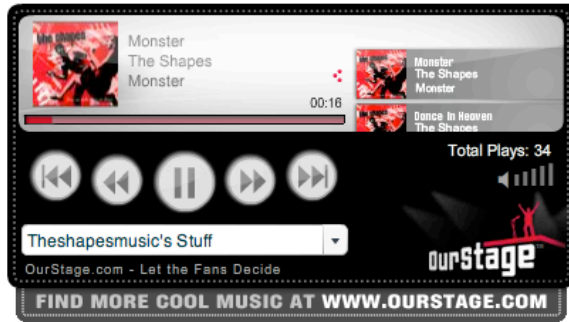

Step One: Log into your OurStage account, and click on the My Profile link at the top. You are now at a page that displays your favorites, and some information about you. On the right hand side, there are a series of gray boxes that display various pieces of information. Click on the box on the right hand side that reads, "My Players".

Step Two: On the My Players page, push the New button in the bottom left corner. The right hand side of the screen will fill in with some fields you can fill out. Give your player a name, and choose if you want it to play music or videos, and if you want it to automatically start playing when it loads. Next, tell the player what it should play by choosing an item under the menu, "Playlists for this player." For this example, we'll use My Stuff, which will automatically play through any media you have uploaded to your account. Experiment with the other options to play music on your Favorites list, or other choices!

Push the Preview tab at the top and you can see your new player! There is some HTML code displayed under the player that you can now copy and paste into any other website that supports user-inserted code. Push control-c (on a PC) or command-c (on a Mac) to copy the code to your clipboard. Instructions for MySpace are below.

```
<div style="text-align:center;width:425px;"><div><object
type="application/x-shockwave-flash" height="200" width="400"
align="middle"
data="http://www.ourstage.com/embed/MPDXFOERBFFY.swf"><param
name="movie"
value="http://www.ourstage.com/embed/MPDXFOERBFFY.swf" /><param
```

To use this player on your web page, copy the text above into your clipboard and paste it into your page.

To place your player in your MySpace, do the following:

Step One: Log into MySpace.com, and click "Edit Profile" on the welcome screen. Paste that code from our site into the place on your MySpace where you would like it to appear. Then push Save!

You may enter HTML/DHTML or CSS in any text field. Javascript is not allowed.
Do not use HTML/CSS to cover MySpace advertisements.

To disable clickable links in Interests / Music / Movies / Television / Books / Heroes, put a <Z> anywhere in the box.

Headline:

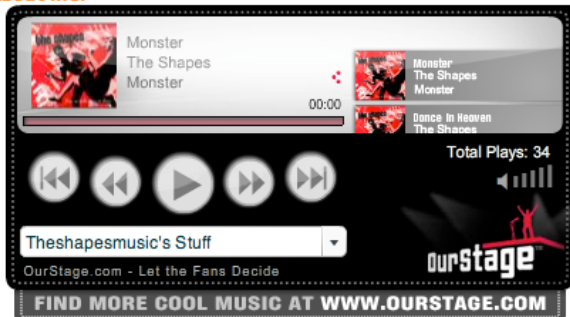

About Me:

```
<div style="text-align:center;width:425px;"><div><object type="application/x-
shockwave-flash" height="200" width="400" align="middle"
data="http://www.ourstage.com/embed/MPDXFOERBFFY.swf"><param name="movie"
value="http://www.ourstage.com/embed/MPDXFOERBFFY.swf" /><param name="quality"
value="high" /><param name="wmode" value="transparent" /></object></div><div><a
href="http://www.ourstage.com/embed/footer/MPDXFOERBFFY"></a></div></div>
```

You can now view your profile with your new player. If you don't like the positioning of the player, go back to Edit Profile and delete the code that you inserted. You can still paste it anywhere else on your profile, since it is still on your clipboard. If you view your profile now, your player will show and begin loading the first track! You're all set.
